

## Business Overview

The Cisco Advanced Services team is a global organisation charged with providing world class services to our customer base. Focused on premium customers, the AS team provides complex design, performance and optimization services to the largest networks in the world. In addition, they are at the forefront in implementing Cisco leading-edge Advanced Technologies across the globe. This is a fast paced, high impact environment where you will directly contribute to the success of Cisco's customers in deploying and utilizing the latest networking technologies. You will see a wide variety of real world customer networks and be continually challenged to expand your networking knowledge, ability to improve customer networks and to implement new services on the IP network infrastructure.

Welcome to a network of talented graduates who envision new possibilities, enable innovation, and create things never before imagined.

## The role

Associate Network Consulting Engineer (ANCE)

## Summary of the opportunities

The Associate Network Consulting Engineer (ANCE) course is an extensive training and work experience program that provides you with the training to be a capable Network Consulting Engineer. It is an ideal career for people who can combine great technical expertise with good communication skills. In the Cisco Advanced Services team you will work with the latest technologies and work together with the best technical experts in the industry.

Our training is based in Brussels, Belgium and using the Cisco model of education, exposure, and experience, you will receive education in a classroom environment followed by exposure in a mentored environment where you will gain experience via hands on work.

Opportunities in Cisco Advanced Services start in summer 2008. You must be eligible to live and work in the EU without sponsorship or a visa from Cisco.
