Job Title:	Quality Assurance Engineer (m/f)
Position Type:	Full-Time / Part-Time
Location:	Coimbra, Portugal
Education:	University degree on Information Technology or Software Engineering
Description:	As a QA Engineer you will join the software quality assurance team and be responsible for ensuring great satisfaction of the customers by working with the development teams to automate testing, create new test harnesses, implement new automation tools and create innovative automated test systems. You will design test cases and execute them in order to identify deviations from the specification as early as possible. You will be a main driver for increasing the quality standards also within the other teams inside WIT-Software. Essential Job Duties will include:

- Test Planning – review specifications, design test cases in order to verify the requirements with high focus on reusability.
- Test Execution – execute test cases, troubleshoot problems found, and prepare defects as well as test reports.
- Test Improvements – provide feedback on what can be improved within QA and software developer teams.

Candidate Profile:

- Strong technological background
- Very good technical skills
- Highly motivated, autonomous, pro-active and curious
- Ability to organize and prioritize tasks based on priority and on colleague's work progress
- Capability of researching new tools and adapt current processes accordingly
- Capability of building new automated tools and creating automated script tests
- Capability of creating automated tests that require minimal maintenance over the time
- Capability of creating manual test plans and executing the tests
- Capability of being formal in reporting tests results to a defect tracking system
- Understanding of technologies including Database handling, Unix knowledge and ability to understand Java and C++ code
- Fluent in English is a must

Advantages

- Previous working experience in software testing and development
- Experience in agile methodologies

About WIT Software

WIT-Software is a software company that creates smart applications and services for telecommunication and media companies. WIT provides technical consulting and software development for any company that wants to exploit the power of Mobile and Fixed Communications. The expertise on mobile technologies and software development allows us to deploy products and services for the mobile consumer and enterprise markets. We can provide enterprise application integration, develop applicational servers, client software for mobile phones, PC, game consoles and TV set top boxes. Our excellence in these areas has lead to strong strategic partnerships with companies like Vodafone Portugal, for whom we have been developing software products since day one.
